TEMPLATING OF WORKTOPS

Please ensure an authorised person is on site for the template – there are some design decisions that require authorisation such as edge profiles and decisions about drainer grooves.

Unfortunately alterations/additions cannot be made after taking the template as the fabrication is based on the template taken by the team at the time of the site visit. On site alterations during installation may incur additional charges.

Taps, sinks and hobs must be disconnected and available on site to be measured by our supplier's templating team. Gas and electrical appliances must be fixed in position for templating and accessories that may impact the template must be available on site.

Prior to installation sinks, taps and hobs must be disconnected. Tiling in surrounding areas must take place after installation – this will always give a much neater finish.

Unfortunately our supplier can't take responsibility for damaged plasterwork and its costs. Scuffs and small amounts of damage to plasterwork in the vicinity of the worktop are to be expected during installation – they are large, heavy & unwieldy objects.

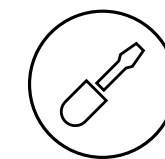

Do not stand on installed worktops as these may break or crack. If the site isn't complete after installation takes place, worktops must be covered to avoid paint stains, scratching by tools, etc.

Our supplier seals all natural stones, to make surfaces stain resistant rather than stain free, they cannot take responsibility for stains or scratches on natural stones. We recommend using Bar Keepers Friend on any more stubborn stains in day to day use.

TEMPLATING OF WORKTOPS

Surfaces over 2 square metres will require additional manpower from the site team since the weight of a slab is normally between 250-350KG.

Our supplier does not specialise in plumbing, electricity or gas connections and isn't able to undertake related work – you will need to arrange for appropriate trades to make connections once the worktop has been installed.

A visit charge of GBP200+vat is applicable should our supplier be unable to carry out works due to any of the above non-compliances. Cancellations and changes are to be authorised by our supplier with 48hs notice. Any notice under 48hs would be charged at £200+vat.
